Date of birth: 25.01.1979 | Marital Status: Married

Summary: BI Developer with five years of experience in implementing OLTP Databases and Data warehouses, creating ETL packages with Microsoft SSIS, and writing SQL queries to create Report. Visualizing data by DAX and Power BI to help make data-driven decisions. I am looking for a position where I can use my proven SQL skills, improve the company's database and develop software to increase productivity. I have started developing and implementing data solutions and have proven experience in improving process quality.

In the field of programming languages, I first started by learning Java and developed a warehouse-related program. With Java in Android programming, I developed a second version of my warehouse app for Android. For better work with data, I learned Python. I learned to use Power Shell. I studied HTML, CSS, JavaScript. I became familiar with SAP and ABAP programming language.

I have 14 years of experience, working in industrial environments. During these years, I learned the processes of Production, Warehousing, Sales, Quality Assurance, Purchasing, and Planning. I believe my previous experiences have been helping me in the next chapter of my work as a Software programmer.

I am interested in new challenges and I enjoy solving problems.

SKILLS:

Business Intelligence: Data warehouse, ETL, SSIS

Microsoft SQL Server: Data Model, Developing SQL Queries, Procedures, etc.

Analysis and Design: Object Oriented Analysis and Design, UML diagrams

Tools: SSMS, Power BI, Tableau, Power Shell, SQLite, NetBeans, Microsoft Visual Studio, PyCharm, Git
